

# LIFEJACKET LIGHTS

## Daniamant Lifejacket Lights meet all the latest IMO SOLAS standards

### Dan M3

This new, low profile light is a single compact flashing unit. It is manually activated by pressing the switch on the front of the light. The light is emitted through an ultra low profile dome, making the light less susceptible to damage during evacuation.

### Dan MR3

MR3 is the recessed version of the Dan M3. This light has a special fitting clip designed for attachment to a lifejacket so that only the ultra low profile dome is above the fabric on the jacket. The light is specially designed for lifejackets used on passenger vessels with evacuation or chute systems for mass evacuation of passengers.

### Dan W3

This is the automatic version of Dan M3. The light activates automatically when in water and can be turned off manually if required.

### Dan WR3

WR3 is the recessed version of the Dan W3. This light has a special fitting clip designed for attachment to a lifejacket so that only the ultra low profile dome is above the fabric on the jacket. The light is specially designed for lifejackets used on passenger vessels with evacuation or chute systems for mass evacuation of passengers.

Daniamant design and manufacture all of our products in line with the Quality Management System (ISO), relevant worldwide approvals, technical specifications, current legislation and International directives.

Our mission is to achieve World class performance through partnerships with our suppliers, customers and employees, providing products and services that enhance the safety and security of our customers.

#### **Daniamant products cover five key areas:**

- Lifejacket Lights
- Liferaft Lights
- Lifebuoy Lights
- Intrinsically Safe Lights
- Special Lights

# LIFEJACKET LIGHTS

## All Daniamant Lifejacket Lights offer:

- A full range to suit all applications
- Minimum 0.75cd light output.
- Minimum 8 hour light duration
- Fully MED approved
- IMO SOLAS approved
- Easy to fit
- Five year life

## Dan M2

The light is a single compact flashing unit. It is manually activated by rotation of the light dome. Easily fitted with two different backing plates, one to go over a thin strap and one to go over a 5cm belt.

## Dan MR2

MR2 is the recessed version of the Dan M2. This light has a special fitting clip, designed for attachment to a lifejacket so that only the dome is above the fabric on the jacket. The light is specially designed for lifejackets used on passenger vessels with evacuation or chute systems for mass evacuation of passengers.

## Dan W2

This is the automatic version of Dan M2. The light activates automatically when in water and can be turned off manually if required. The light has the same attachment arrangement as the Dan M2.

## Dan WR2

WR2 is the recessed version of the Dan W2. This light has a special fitting clip, designed for attachment to a lifejacket so that only the dome is above the fabric on the jacket. The light is specially designed for lifejackets used on passenger vessels with evacuation or chute systems for mass evacuation of passengers.

## L6

The L6 is a small, compact and robust flashing Lifejacket light. The L6 is a manually activated, one piece light.

## L6A

The L6A is very similar to the manual L6, but it is an automatically activated light. It uses a lead to ensure the light comes on in the water and that lead allows the light to be switched off if required.

## L7A2

The unique L7A2 now replaces the well-established L7A. The design is similar, however the L7A2 is around half the length of the earlier light. The L7A2 can be supplied with a new, shorter receptacle for permanent mounting into the foam material of the inherently buoyant lifejacket, or it can be retrofitted into the existing L7A receptacle.
